

actually spreads out along the top surface of the bootie, thus removing it from becoming an adverse problem in the operations that the given wearer might wish to carry out.

FIG. 3 further supports the descriptive presented by FIG. 2. FIG. 4 now allows one to see the configuration of the completed design laid flat. From 16I to 17I, the distance is found to be twenty-eight inches. 18J and 19J mark the distance across the bottom length of the shoe, approximately fifteen inches in length. The distance between 1A, the uppermost elastic band, and 2A, the bottommost elastic band, is twelve inches in distance. The distance found between points 1A and 16I is approximately ten and five tenths inches. FIG. 5 shows the whole person in operation of caring for a lawn while wearing the Lawn Care Booties.

CLAIM

I, Gary Foster, claim: My invention will keep the lower part of pants, shoes, and socks clean while lawn trimming with gas or electric trimmers and they are disposable after usage.
